

ReMedium PDRN

Revitalizing & Moisturizing & Tightening and Lifting
Hyaluronic Acid and PDRN

The effective percentage of the complex of PDRN and Niacinamide with Hyaluronic Acid is 20mg/ml. The safest skin therapy.

Clinical trials of this product

In the course of research, it was proved that due to the natural "leakage" of the concentration after the introduction of the product, The % content of PDRN and niacinamide led to the average 7.5% + 5%

PDRN therapy is the most popular skin rejuvenation procedure. Polynucleotides in cosmetology are a breakthrough in terms of science and practice. Polynucleotides are incorporated into the cell, which guarantees effective rejuvenation.

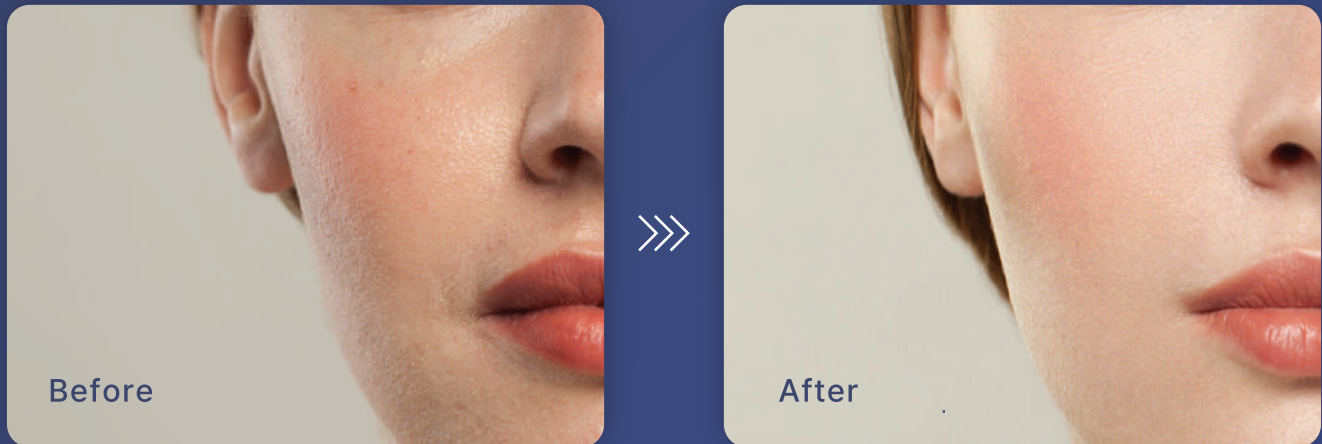

PDRN is isolated from enzymes of salmonids, in turn they act as "builders" and carry out the production of collagen.

The reason for the change in the structure of the skin is a violation of the collagen framework. Massive accumulation of elastoid masses in the papillary and reticular layers of the dermis and the absence of collagen are the main signs of skin aging. And with chronoaging, they are aggravated as a result of endocrine changes.

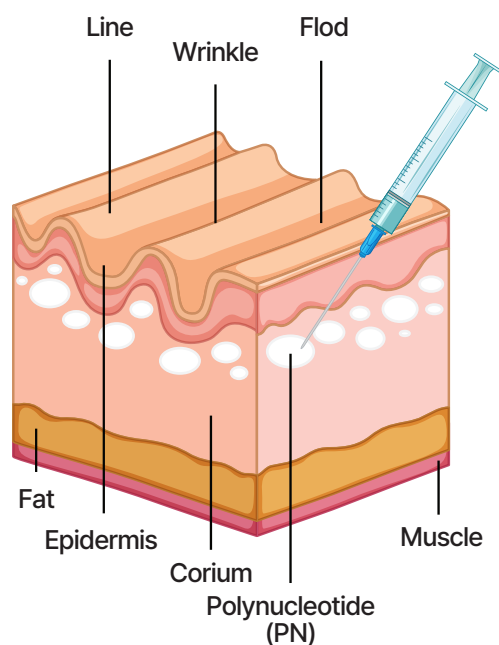

Effects of ReMedium PDRN?

Since the product is embedded in the DNA, collagen actively grows and skin radiance appears, which is noticeable in the figure.

The mechanism of action of PDRN

Transfer of genetic information from DNA (pdrn) to a specific protein. The indicators of the DNA structure of sturgeon milk and DNA of human leukocytes are very close. The basis is the immunomodulatory effect. Stimulating the independent production of collagen lost with age, while ensuring the removal of free radicals from the body.

Indications

A wide range of cosmetic problems, since only this concentration of PDRN has the ability to modulate various physiological processes. (It adapts to the type of skin and solves many aesthetic troubles, since polynucleotides are skin rehabilitators).

- Regeneration
- Lightening
- Smoothing fine wrinkles
- Lymphatic drainage action

Areas of ReMedium PDRN injection?

COURSE OF PROCEDURES

- 3 procedures 1 time in 14 days.

INTRODUCTION TECHNIQUE

- Linearly - retrograde
- Tubercular
- Hot point technique
- Papular

Result

The patient will be able to notice lightening and increased turgor within 24 hours.

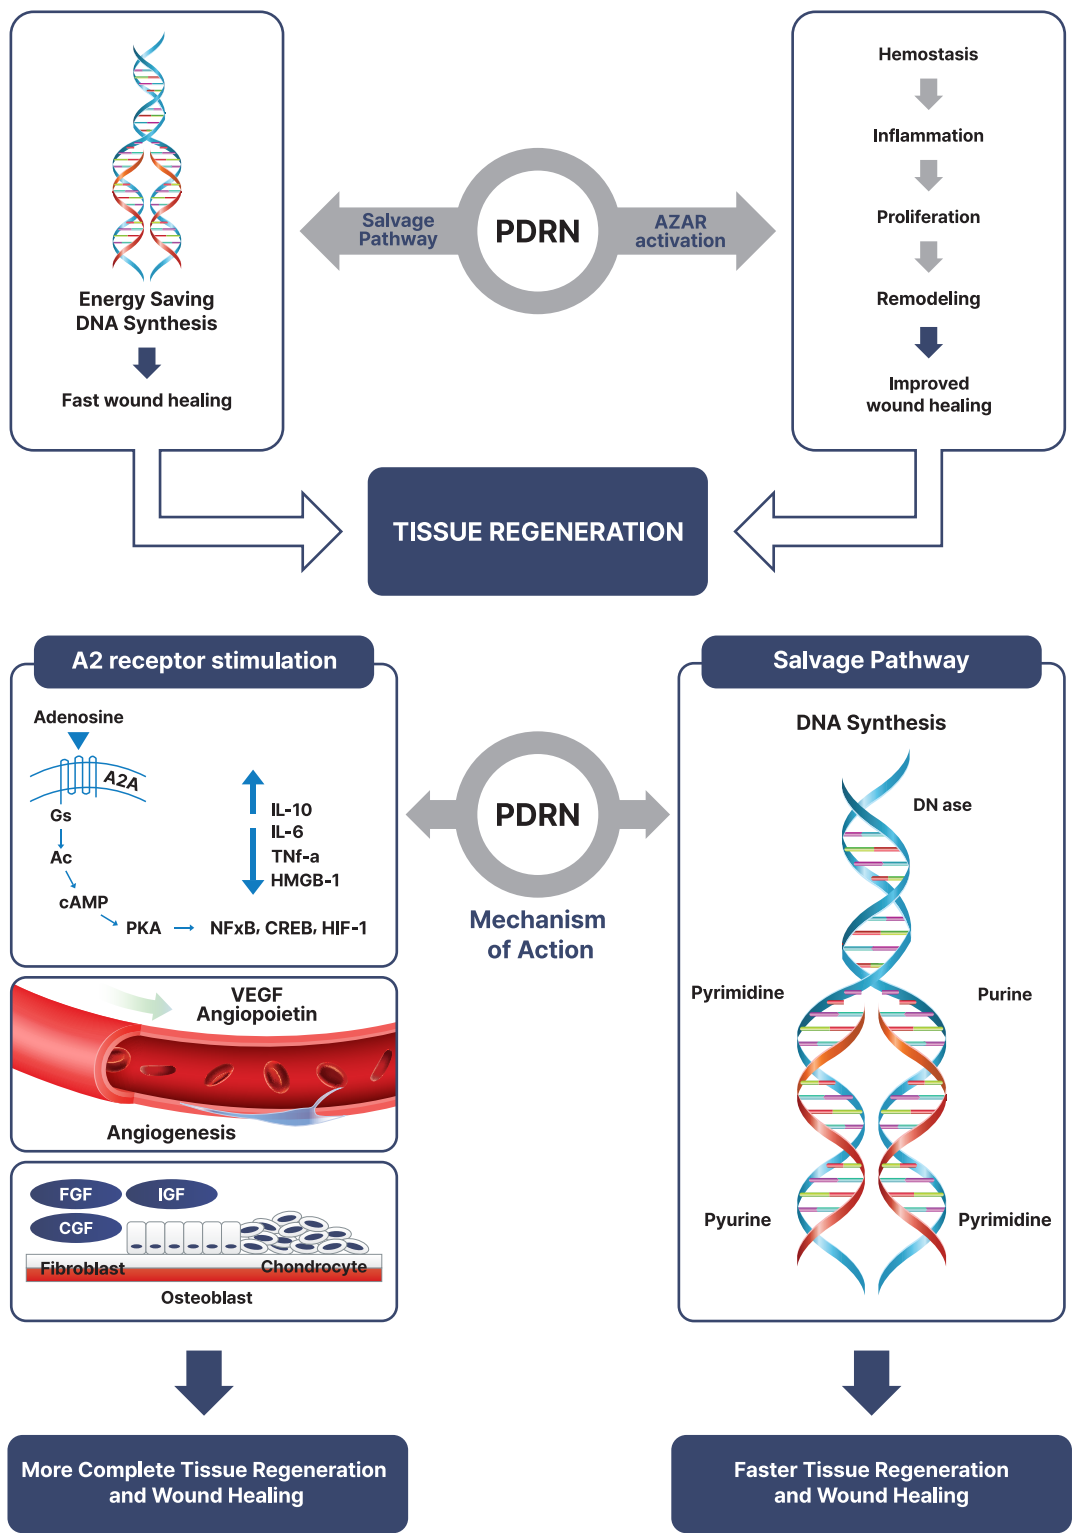

The final result can be assessed strictly after 28 days.

Combination with other procedures

Combination with hardware cosmetology. Rehabilitation period after blepharoplasty and circular lifting. Working with stretch marks on the body in the postpartum period.

Mechanism of Action

Long polymer chains of polynucleotides bind water molecules, thereby enhancing overall hydration. The PDRN molecule is embedded in the "target", as a result, active tissue regeneration occurs, and the skin's own natural processes are activated.

The HA ReMedium PDRN Advantage

The most powerful complex for skin rejuvenation. The concentration of niacinamide does not cause an allergic reaction, but it is very active on problem skin. It is a powerful whitening complex with a lifting effect.

It belongs to the group of bioreparants, as it not only moisturizes the skin, but also affects the deep layers of the dermis in the fight against aesthetic problems.

Contraindications

- Enzyme intolerance (sturgeon)
- Autoimmune diseases
- Fungal skin lesions
- Pregnancy and lactation
- Acute respiratory diseases

Structure

- Purified Water
- Sodium phosphate dibasic di hydrate ($\text{Na}_2\text{HPO}_4 \cdot 2\text{H}_2\text{O}$)
- Sodium phosphate monobasic dihydrate
- Sodium Chloride (NaCl)
- Polydeoxyribonucleotide (PDRN)
- Niacinamide
- Hyaluronic Acid (HA)

Release form

- 2.2 ml × 3 syringes
